

Ex-no: 2	SED,VI,NANO EDITOR
20/01/26	

Aim

To study and practice the usage of text editors **vi**, **nano**, and stream editor **sed** in Linux for creating, editing, and manipulating text files.

Algorithm

1. Open the Linux terminal.
2. Create and edit a file using **vi editor**.
3. Create and edit a file using **nano editor**.
4. Use **sed editor** to perform text manipulation operations on a file.
5. Save the changes and display the output.
6. Verify the results of each editor.

Commands

1. vi Editor

- `vi file.txt` → Open/create file
- Press `i` → Enter insert mode
- Type content
- Press `Esc` → Exit insert mode
- `:w` → Save file
- `:q` → Quit
- `:wq` → Save and quit

2. nano Editor

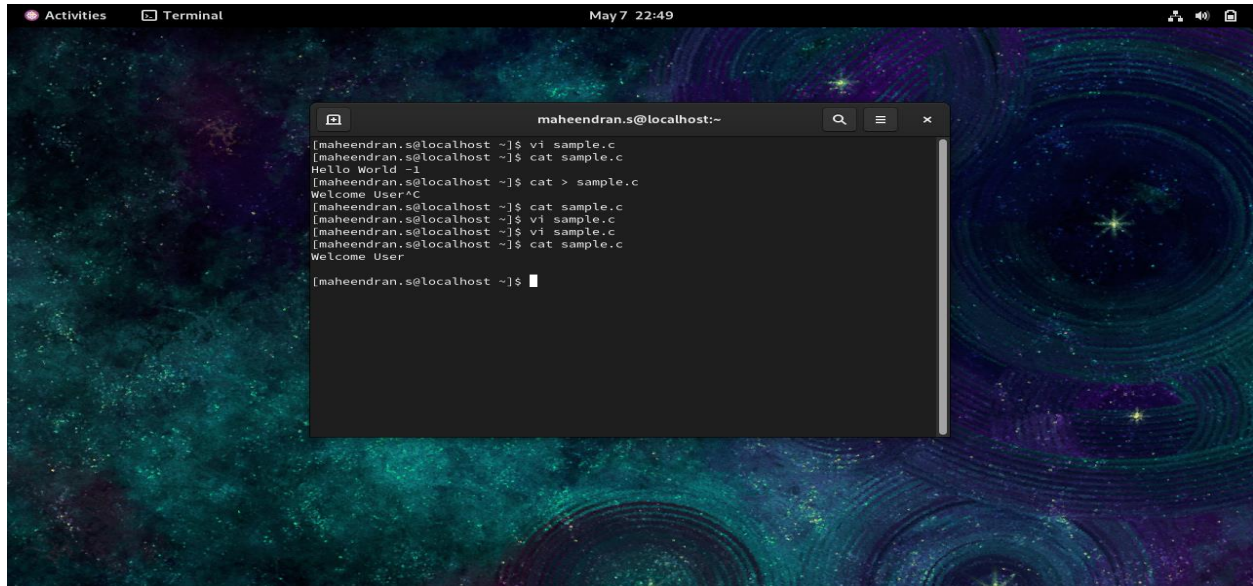

- `nano file.txt` → Open/create file
- Type content directly
- `Ctrl + O` → Save file
- `Enter` → Confirm
- `Ctrl + X` → Exit editor

3. sed Editor (Stream Editor)

- `sed 's/old/new/' file.txt` → Replace first occurrence in each line
- `sed 's/old/new/g' file.txt` → Replace all occurrences
- `sed '1d' file.txt` → Delete first line

- `sed '/word/d' file.txt` → Delete lines containing word
- `sed -n '1,3p' file.txt` → Print lines 1 to 3

OUTPUT:

```
maheendran.s@localhost:~  
[maheendran.s@localhost ~]$ vi sample.c  
[maheendran.s@localhost ~]$ cat sample.c  
Hello World ~1  
[maheendran.s@localhost ~]$ cat > sample.c  
Welcome User~  
[maheendran.s@localhost ~]$ cat sample.c  
Welcome User  
[maheendran.s@localhost ~]$
```

Result

The vi and nano editors were used successfully to create and edit text files, and the sed editor was used to perform text manipulation operations. The outputs were verified, and the experiment demonstrated the working of different Linux text editors.
